

RestorixHealth innovates their supply chain with planning and fulfillment solution

Customer Success Story

Overview

RestorixHealth is the leading developer and operator of advanced wound healing centers and direct care services. The company was using manual processes and paper-based picking for their warehouse through BrightPearl, which lacked KPI tracking and reporting. Through a warehouse assessment by their logistics partner, RestorixHealth selected Deposco's WMS for its extensive reporting capabilities and the feeling of having a true partner.

Deposco helped us establish company KPIs that we did not have before. The system has helped us find products quicker and address issues sooner, so we can fulfill patients' needs faster than ever before."

Solution

RestorixHealth became more efficient on Day One live with Deposco. Right away they saw inventory accuracy improve from 97% to 99.5%, and an increase in productivity and staff trackability.

With a more efficient warehouse on the execution side, RestorixHealth decided to try Deposco on the supply chain planning side. Connecting their fulfillment operations to supply chain planning provides an end-to-end-solution with one source of truth. This allows for real-time updates enterprise-wide. Now RestorixHealth can continue to serve their customers with confidence, data accuracy, increased control, and improved efficiency across the organization.

Our team doesn't have to worry about data integrity issues or communication problems with Deposco's single-codebase platform. My team of planners now have more time to spend on more important things than fixing what should be automatic."

Brent Mead

Supply Chain Planning Manager
