

scale3PL Doubles Throughput, Delivers 99.5% Accuracy with Deposco + Robotics

Customer Success Story

Overview

Based in Southern California, scale3PL runs fulfillment for fast-moving ecommerce and wholesale brands in apparel, cosmetics, headwear, footwear, and lifestyle categories.

I wouldn't launch another facility without Deposco and the integrations behind it to support our robotics. It's the difference between a warehouse that drags you down—and one that speeds you up."

Adam Lawicki

Executive Vice President of Strategy

Challenges

“scale3PL isn’t built for average—we set the bar high for precision, speed, and end-to-end integration,” Lawicki says. “No platform met our standards for inventory accuracy, real-time workflows, and automation. We needed a system that could scale 30–40% year-over-year, connect every piece of our robotics stack, and maintain client trust without tradeoffs.”

Deposco was the first to measure up.

Solution

scale3PL chose Deposco for speed, per-client flexibility, and hands-on support that stays long after go-live. The goals: eliminate failure points, protect client trust, and build a logistics platform that scales without friction.

Key Stack Components:

- ✓ **Deposco OMS + WMS:** controls flow from order drop to dock scan
- ✓ **Locus Robotics:** autonomous fleet, cutting walk time and boosting throughput
- ✓ **Tension autobagger + conveyor:** high-volume, touchless packout line
- ✓ **Smart rate shopping:** selects lowest-cost service based on actual DIMs, not estimates

Our goal is simple: pick right, pack right, ship right—at scale3PL. We automate the standard so exceptions turn into exceptional experiences. So when a client asks, ‘Can you handle this?’ our answer is yes.”

Lawicki says Deposco’s partnership approach and high-quality team give scale3PL confidence they have a platform that can meet their evolving needs.

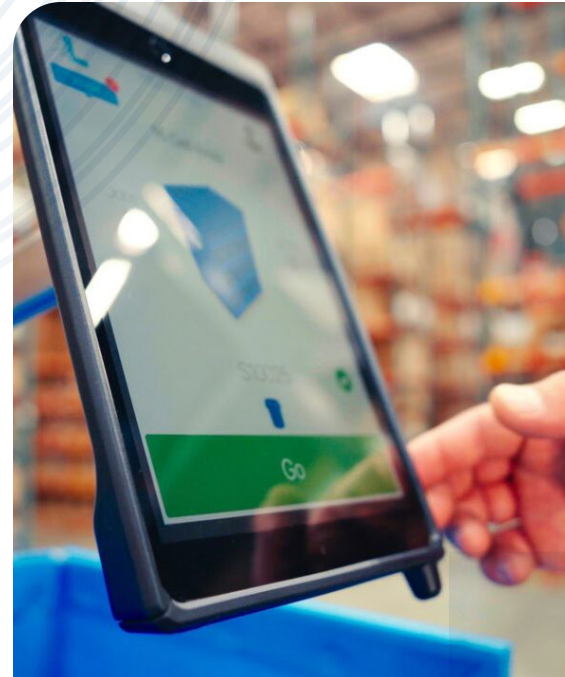

Designed for exceptional capability, scale3PL’s logistics stack forges software integration and mechanical automation to deliver incredible results.

Results

With Deposco, scale3PL runs faster, leaner, and with near-perfect accuracy—daily.

- ✓ **99.5%+ accuracy, daily**
“Customers expect perfection. And that’s what we deliver.” said Lawicki. “And every single one of our clients have complimented our choice in systems and our tech stack.”
- ✓ **Real-time order control**
Edit, upgrade shipping methods or cancel orders, even after release and picking.
- ✓ **Safer, happier floors**
Less walking and strain = lower injury risk, higher focus on speed + accuracy.
- ✓ **Volume flexibility, built for “ever-peak” mode**
Flash sales, influencer drops, restocks, and off-season surges are routine. We engineered our ops to run in what we call “ever-peak” mode—because growth doesn’t wait for Q4. Labor, slotting, and carrier planning flex year-round so clients scale smoothly, without disruption.

Deposco meets us where we are. Their team—from execs to project managers to help desk—stays in the trenches with us. That’s why we trust them.
