DEPOSCO

Bright Basics

Inventory management for SMB

Designed to help rapidly growing SMB businesses to streamline warehouse operations by optimizing inventory, fulfillment, receiving, picking, shipping, and customer returns.

Bright Basics

Inventory management for SMB

As a growing business it can be a challenge to find a solution with all capabilities needed to operate efficiency without the enterprise price tag. Bright Basics provides growing businesses with the functionality needed now in a warehouse management system (WMS) at an affordable price with no hidden costs.

Say goodbye to siloed systems. With pre-built integrations to most ERP and marketplaces it is easier than ever to view all data in one place. Create reports around processes such as cycle counts, receiving, and inbound and outbound shipments.

As your business scales, upgrade to Bright Suite, a more robust solution, on the same platform and with no costly implementation. You can easily pull in all your historical data during the transition since it's housed on the same user-friendly interface. From a one-warehouse operation to an enterprise operation, Deposco Bright Suite supports businesses through the life of the business.

- ✓ Support operations and gain full visibility within the warehouse. With unlimited users, there is no penalty for growth, increasing your margin even more.

- ✓ Bright Basics enables you to establish best practices such as automated and priority waving, location assignment (min/max), cycle counting and batch picking and packing.

- ✓ Experience full visibility inside the warehouse and grow faster with automated processes and best practices.
