

Bright Performance

Analytics and reporting

Gain access to real-time data through multiple reporting and analytics options that enable you to improve decision-making and measure performance.

Bright Performance

Analytics and reporting

Due to the increasing complexity of supply chains, analytics tools and reports can give businesses a huge competitive advantage by providing strategic guidance for supply chain design and execution. Gathering the right data and calculating the right key performance indicators is a requirement when it comes to improving warehouse operations.

Deposco's Bright Performance is a powerful analytics and reporting application that will provide your business faster, easier reporting, giving you important insights into inventory, orders, locations, customers, and speed of fulfillment.

With Bright Performance enabled, the data generated from Deposco's other applications - Bright Order, Bright Warehouse or Bright Store - can be leveraged to make quicker more profitable decisions about labor, shipping, and product sales. Our Bright Performance application serves as an automated, decision making engine driven by statistics and quantifiable performance indicators.

- ✓ Capture real-time data, such as order count, fill rate, backorders and misships in order to benchmark, track, and optimize the performance of your overall labor and operations
- ✓ Build custom reports for any aspect of your business and have them automatically shared with selective staff, customers, suppliers, or key stakeholders
- ✓ Generate detailed reports, alerts and notifications related to sales, inventory, financials, processes, and overall performance
- ✓ Monitor processes and operational performance with easy-to-read, customized, real-time dashboards
