Bright Source

Sourcing and purchasing

Manage purchasing and replenishing all in one system. Bright Source allows you to manage supplier profiles and create purchase orders in draft mode before submitting the order.

Bright Source

Sourcing and purchasing

Deposco's Bright Source application provides inventory management and vendor profiles to help utilize the extended supplier network to fulfill orders.

Bright Source allows your purchasing team to start an order in draft mode directly in the solution. Once the purchasing team has finalized the order, submit it to the suppliers for bidding within the system. From corporate, access real-time visibility of order receipts from the receiving team in the warehouse and across any third-party logistics networks being utilized. This allows your purchasing team to adjust future orders based on current inventory levels.

Allow every supplier to view their particular orders with a specific login. Create and manage supplier profiles filled with data such as payment terms, reorder points, minimum purchase amounts, unit costs, and lead times. Empowered with the ability to track vendor SKUs, shopping across multiple vendors for the best price on an item is simple.

- ✓ Understand your product cost and track cost fluctuations of consistent orders
- ✓ Generate purchase orders with supplies leveraging real time inventory and order data
- ✓ Set re-ordering limits to prevent stockouts
- ✓ Assign orders and communicate directly to suppliers in the solution
- ✓ Collaborate between suppliers, warehouse staff and purchasing teams within the application using built-in comments and notes to better understand order specifics
