

Bright Warehouse

Warehouse management

Streamline your warehouse operations by optimizing inventory and order management, putaway, picking, packing, shipping and returns.

Bright Warehouse

Warehouse management

A strong warehouse management software like Deposco's Bright Warehouse application provides Enterprise-grade benefits and advantages, regardless of your existing size and infrastructure. Streamline warehouse operations by optimizing inventory and order management, picking, putaway, shipping and returns. The flexible structure of Bright Warehouse™ ensures that your business logic and processes can be boosted to sync up and integrate into your overall demands within an enterprise resource planning (ERP) infrastructure.

With complete end-to-end control, monitoring and company-wide visibility, you will be prepared for on demand sourcing and fulfillment strategies that meet the extremes brought on by peak seasons, promotions and new product launches. Bright Warehouse™ ensures that you take advantage of all of your building, hardware, inventory and human assets to cost-effectively meet the intense market demands of the new express fulfillment model for improving order to cash.

- ✔ Enterprise-level inventory management with inbound and outbound visibility and tracking
- ✔ Optimize waving, picking and packing strategies including advanced cartonization services
- ✔ Print labels and ship from multimodal shipping management with UPS®, UPS FreightSM and other carriers
- ✔ Process B2B orders using retail-compliant labels for multimodal shipping
- ✔ Establish a single repository of orders and inventory across all warehouses and stores
